Computer Engineering major with a focus on the intersection of Systems Engineering and Data Processing. Proficient in deploying containerized applications and streamlining backend services to ensure consistency and scalability. Interested in building automated infrastructure that turns sophisticated data analysis into seamless user experiences.

EXPERIENCE

PT Miotto Agung Mobilitas · *Full-Stack Developer Intern*
Jakarta, Indonesia · 2025

- Developed an end-to-end GPS tracking system for palm oil plantations, including hardware integration, data cleaning, and raw data analysis for operational insights.
- Built a web-based dashboard with full CRUD functionality to manage worker data and streamline plantation monitoring.
- Implemented data queueing to handle high-frequency location streams and prevent data loss.
- Containerized the entire architecture using Docker to ensure seamless deployment and system accessibility.

MAGE X (Multimedia And Game Event) · *Front-End Web Developer*
Surabaya, Indonesia · 2024

- Developed a responsive website using Framer Motion to create dynamic and interactive user interfaces.
- Implemented user authentication and credentials management using Auth0 for secure competition registration.
- Utilize Git for version control and collaboration.

LAB MIOT (Multimedia and Internet of Things) · *Basic Programming Practicum Assistant*
Surabaya, Indonesia · 2024

- Mentored students in Computational Thinking and C Programming.
- Designed and created a series of coding practice problems with main concepts such as Variables, Conditional Statements, Looping, and Pointers.
- Assessed student work and delivered actionable guidance for growth.

PROJECTS

Indonesian Stock News Automation · *Automation Workflow*
[Data Results](#) - 2025

- Developed an automated stock news sentiment analysis workflow using n8n to streamline information gathering.
- Fine tuned a IndoBERT model for sentiment classification.

AutoReps · *AI-Powered Squat Exercise Correction System*
[GitHub Repository](#) - 2024

EDUCATION

Institut Teknologi Sepuluh Nopember
Computer Engineering
2022 - Present

SMAS DON BOSCO 1 JAKARTA
Science
2019 - 2022

SOFTWARE

Platform
React, Flutter, Svelte, Node.js, Next.js, TypeScript

Data/AI
PostgreSQL, MongoDB, Redis, RabbitMQ, Python, Jupyter

Tools
Git, n8n, Linux, Docker, Vercel, Figma,

- Squat correction app using MediaPipe via Google ML Kit to detect 33 body pose landmarks with low latency. GitLab
- Engineered real-time feedback and form correction algorithms to analyze leg and knee alignment during exercise.

Pneumonia Classification · *Pneumonia X-ray Image*

Classification

[Website](#) - 2024

- A web-based pneumonia detection system developed using Python, TensorFlow, and TensorFlow.js.
- Training a model using an open source dataset.
